

## Advanced Manufacturing: Leveraging New Technologies for Transportation

### PANEL DESCRIPTION:

The production of electric vehicles (EVs) increasingly requires the development and use of new technologies to help reduce their environmental impact and improve their efficiency. For example, the automotive, aviation, and ocean technology industries are actively developing battery storage, alternative fuel, and EV infrastructure solutions, among many others, to help solve the carbon emissions problem. And these industries increasingly use digital technologies to improve supply chains, optimize routes, and reduce fuel consumption. This panel will discuss the opportunities and challenges associated with leveraging new technologies for transportation, especially in EVs.

### PANELISTS:

**Moderator:** Moderator (TBD)

**Panelist 1:** David Tyler, Operations Director, Skydweller Aero

**Panelist 2:** Trey Agner, Director of Events and Outreach Mullen Automotive, Inc.

**Panelist 3:** Mike Oatridge, Executive Director Alabama Mobility and Power Center
